Task Division

Pages	Subpages (if needed)	Features	Assigned to
LANDING PAGE			
Log in	None	• Username • Password • Log in Button	Keomony
DASHBOARDS (Based on roles, the dashboard may look slightly different, with some features only available to specific roles)			
Admin/Instructor view (Panel)	Course and section creation	• Create a course (should have at least one “course maintainer”) • Create a section (should have at least one professor and one TA) • Deactivate/reactivate a course • Deactivate/reactivate a section • Select semester • Grid view and list view • Show all courses (separated by section)	Dominic
	Manage account/role	• Assigned an instructor to the course based on the course section • Add people (TA) and students • Add people and manage their roles • Delete course (toggle or drop down)	Dominic
	Statistic Summary	• View statistics • Set restrictions/limitations on	Dominic

		the token and more	
	Monitoring & Analytics	• View all submissions • Submission statistics • Set limitation (200 uploads) • Queue monitoring (pending, running, and failed jobs)	Dominic
Assignment	Individual Assignment	• Uploading button & drag n' drop (single and bulk) • CRUD assignments • Grade assignments (bulk and single) • Deadline (view and edit) • Rubric (view and edit) • Constraints (view and edit) • Statistics: show the percentages of students who have submitted and who haven't.	Vebjørn
	List of all assignments (for each course/section)	• View assignments • Grade assignments (bulk and single) • Deadline (view only) • Statistics: show the percentages of students who have submitted and who haven't.	Vebjørn
	Plagiarism detection	• Activate similar checking or basic detection	Vebjørn
Coding workspace		• Split-pane code editor ◦ One shows the student's code ◦ One shows how many tests pass/fail ◦ Shows starter code if there is any ◦ Console output • View Rubric • Check code button • Submission button • Resubmit button • dark/light mode (optional)	Keomony
Student View	List of all courses registered for this semester	• Grid or list view of all courses the students registered for in the current semester.	Keomony

(what is not listed in the Assignment pages)			
	Feedbacks and scores	● Feedback: ○ Number of tests passed and failed ○ Syntax error ○ Shows expected vs actual output ● Scores (before session end): ○ History ○ Number of attempts ○ Result of each attempt	Keomony
TA Views (Duplicate the wireframe from the Assignment page, but grey out some features)	Individual Assignment	● Uploading buttons (single and bulk) ● CRUD assignments ● Grade assignments (bulk and single) ● Deadline (view only) ● Rubric (view only) ● Constraints (view only) ● Statistics: show the percentages of students who have submitted and who haven't.	
	List of all assignments (for each course/section)	● Grid or list view of all assignments ● Grade assignments (bulk and single) ● Deadline (view only) ● Statistics: show the percentages of students who have submitted and who haven't.	

Pages to show

Role	Pages	Subpages (if needed)	Features	Assigned to
General	Log in page	No subpages	- UVU logo - Log in boxes	Keomony
DASHBOARDS				
Admin	BROWSE PAGES (MAIN)			
	View statistics		Number of token	Vebjørn
	Manages Accounts & Roles		- Can create/edit accounts (TA/instructor/admin) - Can deactivate accounts	Vebjørn
	Manage courses/sections	- List of all sections (separate by courses) - List of all assignments from each section (separate by course)	- Select course/section - View all assignments - Create/edit/delete assignments - Grading the assignments (bulk grading or individual grading) - Creating rubric - Add constraints - Set/change due date - Export grade	Vebjørn
	Create course		TBD	Vebjørn

	Create section		TBD	Vebjørn
	Manages students		- List of all students' grades (separated by section) - For students' grades, if selecting individual grading, there should be a separate screen that shows a bit more detail about each individual student	Vebjørn
	Manage Courses/Assignment Module Page (Sub)			
	All assignments pages (list of all assignments for the courses)			
Student	Browse page			
	Select a course & assignment		TBD	Keomony
	Upload code submission		TBD	Keomony
	View feedback, grades, and test results		3 Split screen (either vertical or horizontal): - Test result on top - Descriptive feedback in the middle - Grades on the bottom	Keomony
	Report Page		- Score summary - LLM summary - Constraint	

			violations (if any) • Inline code annotations • Resubmission upload section	
Instructor	Same permissions/pages as TA plus a few more			
	Create assignments (opens a panel/modal? with the information to put in)			
	Rubric criteria section (either defined manually or imported)			
TA	Browse page			
	Select a course & assignment		Detail view (split plane) • Left: Highlighted code and LLM annotations • Right: rubric with AI score, justification, override field per criterion • Constraint violation panel	Dominic
	Download zip files/code submission		• TBD	Dominic
	Override the feedback, grade		• TBD	Dominic
	View all assignments			Dominic
	Upload bulk Canvas zip for assigned section			Dominic

Things to discuss (you can add more ideas):

1. How many pages we need?

- Login page → must log in
- Admin
- Assignments
 - Course, section
 - Submission navigation — prev/next within assignment
- Code checker (code editor panel)
- ~~Instructor side: Instructor dashboard (Home page for instructor)~~
 - ~~Panel/list of assignments~~
- ~~TA review dashboard: Detail view — split pane:~~
 - ~~Left: syntax-highlighted code with inline LLM comments as margin annotations~~
 - ~~Right: rubric with AI score, justification, override field per criterion~~
- Settings page or dropdown menu?

2. What are the components to include?

- LeetCode-Style Interface: Split-pane code editor (professor's note)
- Provides the UI for both the staff grading workflow and the student sandbox workflow. (Jaxon)
- Login Page
- Save Warning: Because the similarity report is hosted externally by Stanford MOSS, the UI must prominently surface the returned URL and warn the instructor to save it before leaving the page. (Jaxon)

3. What are the framework or languages?

- HTML, CSS, Javascript, React
- Bootstraps? ShadCN for components?
- Jaxon suggests using nextJS as the framework, which easily integrates tailwind for the CSS and typescript for type safety.
- Might want to consider zod (or similar library) for data validation.

4. ??
